

HIV and AIDS

Table 1. Demographic Characteristics of Reported Persons Living with HIV/AIDS and HIV Diagnoses in Franklin County, 2009

	Reported Persons Living with HIV/AIDS, 2009		Reported HIV Diagnoses, 2009		Cumulative Reported HIV Diagnoses, 2005-2009		Franklin County Population (ACS 2009)	Franklin County Population (ACS 2009)
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
White Alone Male	1,719	51%	120	45%	3,098	57%	410,895	35.7%
White Alone Female	164	5%	12	4%	237	4%	439,381	38.2%
Black Alone Male	873	26%	85	32%	1,355	24%	108,658	9.4%
Black Alone Female	416	12%	35	13%	529	10%	113,547	9.9%
Other	133	4%	10	3%	178	4%	87,466	7.6%
Unknown	70	2%	7	3%	76	1%	NA	NA
TOTAL	3,375	100%	269	100%	5,473	100%	1,150,122	100.0%

- Blacks are disproportionately represented among HIV and AIDS cases diagnosed in 2009. Although 19.3% of Franklin County’s population, 45% of Franklin County residents who are black have recent HIV diagnoses.
- In Franklin County, black females account for a larger proportion of recent HIV diagnoses than among whites. Black females composed 13% of reported HIV diagnoses in 2009, whereas white females composed 4%.

Chart 1. Franklin County AIDS Deaths, 3-year averages, 1999-2007

- Franklin County AIDS deaths trended upward from 1999 to 2004, dipping slightly until 2006 before rising to the highest three-year average of 42 per year.

About the Data

Data Sources:

- Ohio Department of Health, HIV/AIDS Surveillance
- U.S. Census Bureau, American Community Survey, 2008

Definitions:

- **HIV:** Human Immunodeficiency Virus
- **AIDS:** Acquired Immunodeficiency Syndrome
- **HIV/AIDS incidence rate:** The number of new HIV cases and AIDS diagnoses per 100,000 population

Explanations and Caveats:

- Data on HIV and AIDS cases represent only those reported cases. Experts believe there are many people infected with the HIV virus that have not been diagnosed and reported.

Update Status:
